Every Rod of Lawn Fence is Fully Guaranteed

Lawn Fence—Spec. F

This is especially designed for use around the House or Barnyard, and for Corrals, Fair Grounds, Parks, Cemeteries, Orchards, Athletic Fields, Race Tracks, or wherever a fairly close meshed fabric is required for general purposes. All cables are No. 12½ wires twisted together in spiral form. Cross wires No. 14 gauge. The small and permanent mesh in Lawn Fence is made by weaving one continuous wire throughout the fabric. The mesh, or stay wires, are so interwoven that slipping is impossible. The triangular truss is the strongest form of construction known; for this reason, Lawn Fence will stand the hardest usage, and still retain its shape. A perfect hinge joint is formed every second cable.

Lawn Fence—Spec. G

This style is similar to Spec. F, except that it has two No. 12½ cables and No. 12½ cross wires, instead of No. 14. On account of the same gauge of wire used throughout this fabric, it is very strong and durable. The difference in price, which represents the extra steel, is very small and well worth the additional cost. When buying Lawn Fence, do not overlook the weight per rod—see how many pounds of steel you are getting for your money. Its a small thing to remember, and a big thing to investigate.

Lawn Fence—Spec. H

This fence is the same as Spec. G, except that all cables are composed of three No. 12½ wires, instead of two. This gives it greater strength, and means added life and service, which more than offsets the slight increase in cost. We highly recommend it for use wherever 4-inch mesh is close enough.

Every Rod of Lawn Fence is Fully Guaranteed

Lawn Fence

Spec. I

This is the same as Spec. F, described on pages 2 and 3, except that it has an opening between mesh wires of two inches, instead of four inches. The mesh is close enough to stop the smallest chickens. It is NON-CLIMBABLE, because even children cannot get their toes into it. As an ornamental fence, especially when mounted on turned posts, its appearance cannot be surpassed in woven fabric. An excellent fence for Tennis Courts and School Yards.

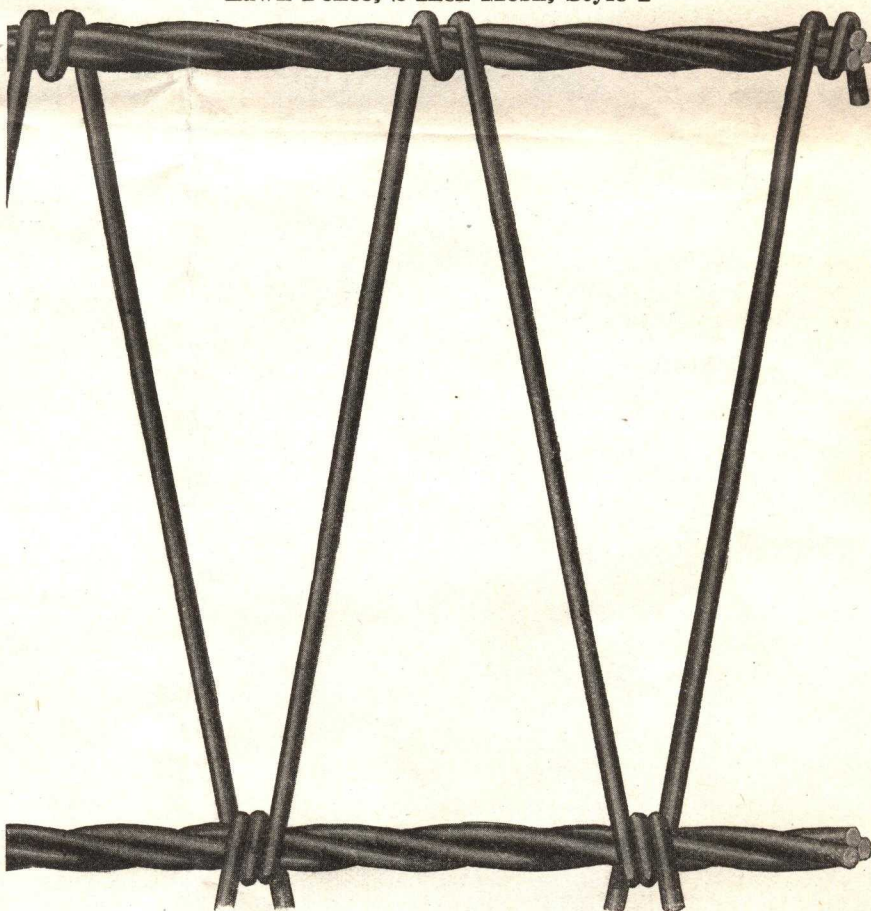

Lawn Fence, 2-Inch Mesh, Style I

The spacing between meshes (two inches) is the same as Spec. I, shown above. This style, however, has two No. 12½ cables and No. 12½ cross wires, instead of No. 14. The heavier wires give it additional strength, because there are more pounds of steel per rod. This is very generally used for all purposes where a strong, substantial, NON-CLIMBABLE fabric is required.

Lawn Fence

Spec. K

This is absolutely the heaviest, strongest and closest meshed wire fabric on the market. The spacing between meshes (two inches) is the same as Spec. I and J, shown above. All cables, however, are composed of three No. 12½ wires spirally twisted together, instead of two. Cross wires No. 12½ instead of No. 14, all heavily galvanized. As a NON-CLIMBABLE and ornamental fence, we recommend it above all others for economy and durability.

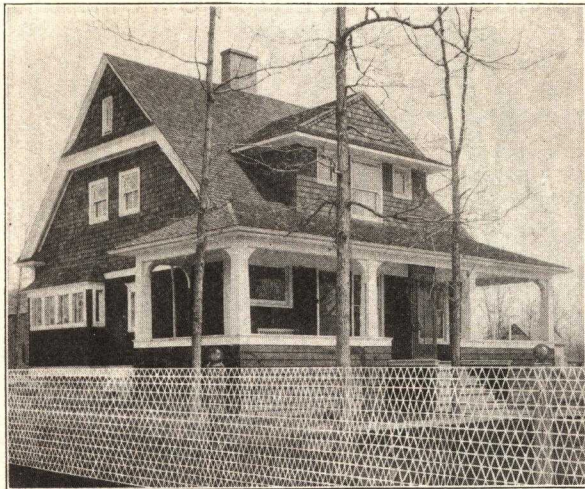

Lawn Fence, 2-Inch Mesh, Style K

Every Rod of Lawn Fence is Fully Guaranteed

Lawn Fence for the Home

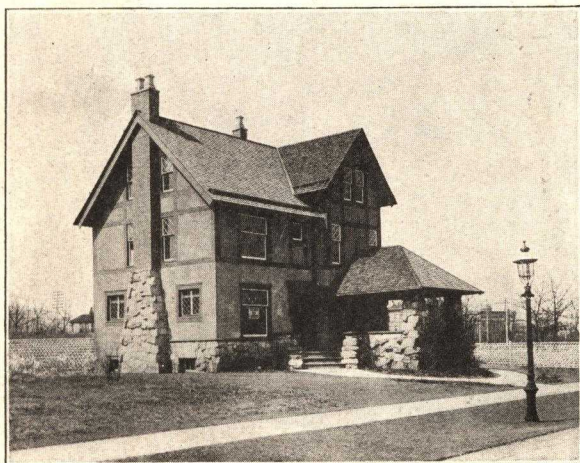

Lawn fence for the home—for a hundred different purposes—has been in use for years and is adopted throughout the country, for city as well as summer homes and farms, by the most fastidious owners of expensive and beautiful places.

The non-climbable, close meshed fabric of woven wire forms a perfect protection from the smallest animals and from children.

Its neat appearance, long life and economy in keeping in order, recommends it to all buyers.

This fence does not obstruct the view from without or within—a feature of special value to owners of attractive homes and lawns.

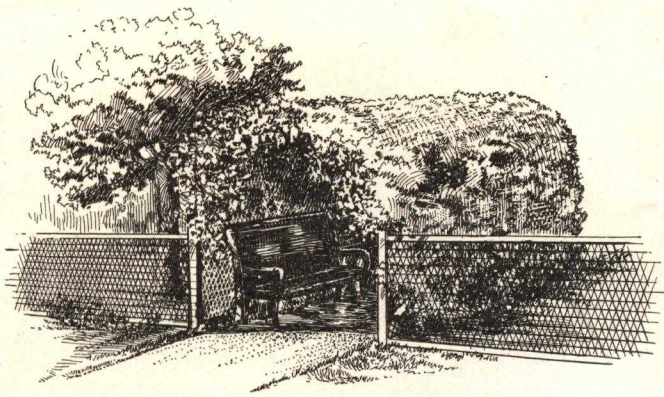

Woven wire fence forms the best bond for vines and climbing plants, making a hedge or background of exceeding beauty.

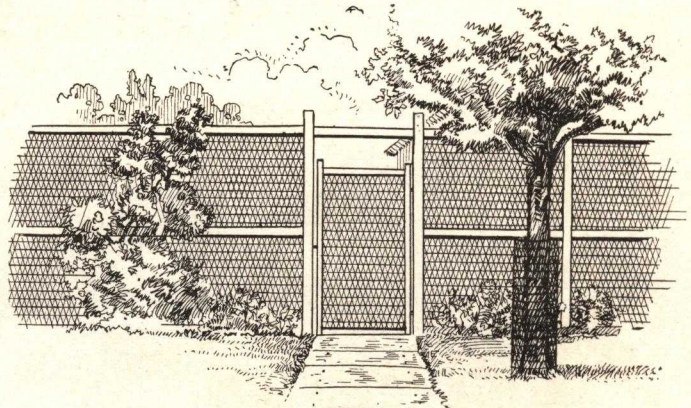

Some of the many uses of lawn fence are illustrated on the following pages.

Made by American Steel & Wire Co.

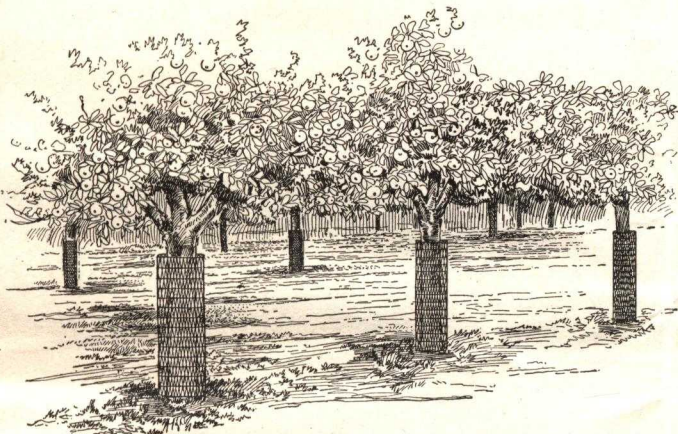

Special Uses for Lawn Fence

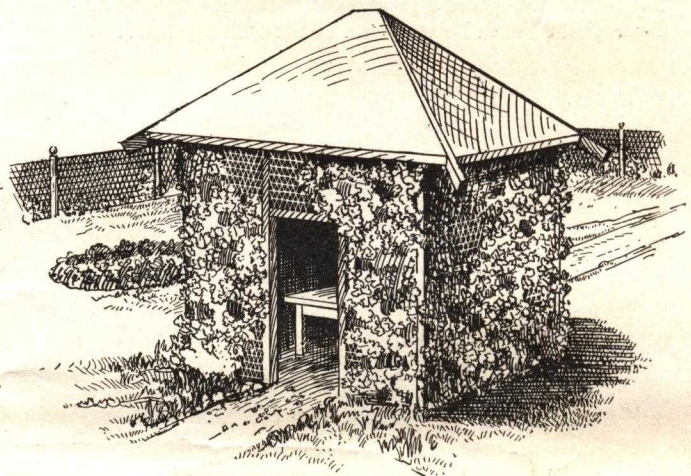

The Grape Arbor, as well as the Dividing Fence, is Lawn Fence, which cannot rot or become infested with insects.

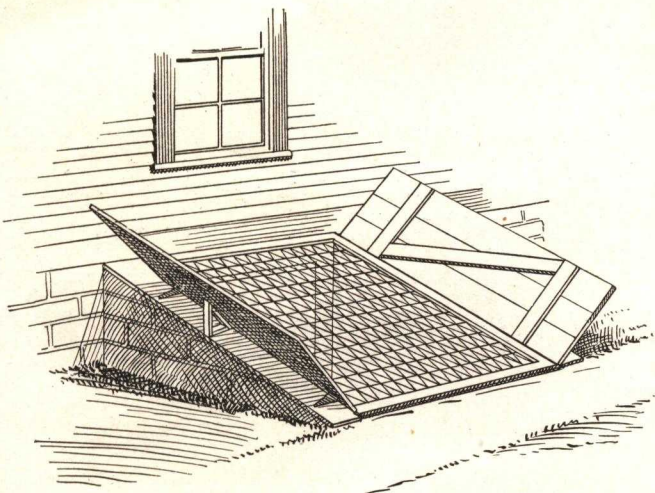

A Most Attractive Means of Screening the Stables or Vegetable Garden from the House and Lawn, making a most artistic background when vine covered.

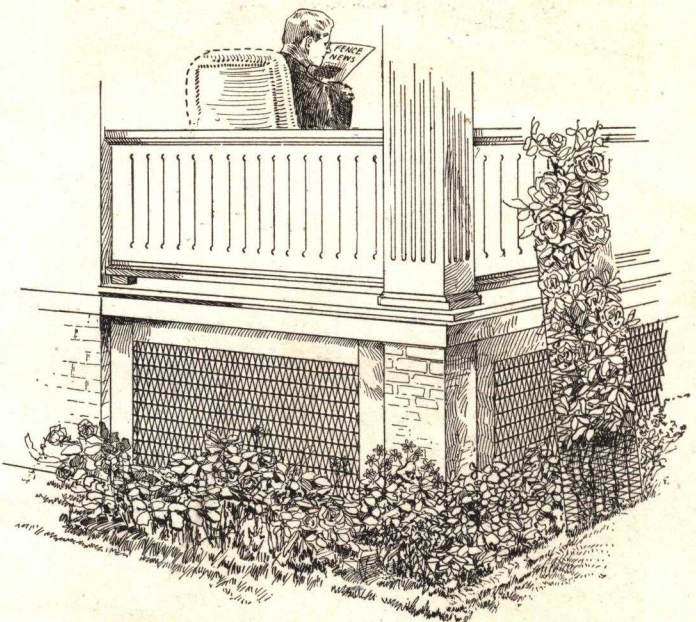

For Protecting Trees in the Orchard, on the Lawn, or Near the Street, Lawn Fence is invaluable.

An Airy and Attractive Summer House of Lawn Fence. It is not alone neat, but cool and free from insects.

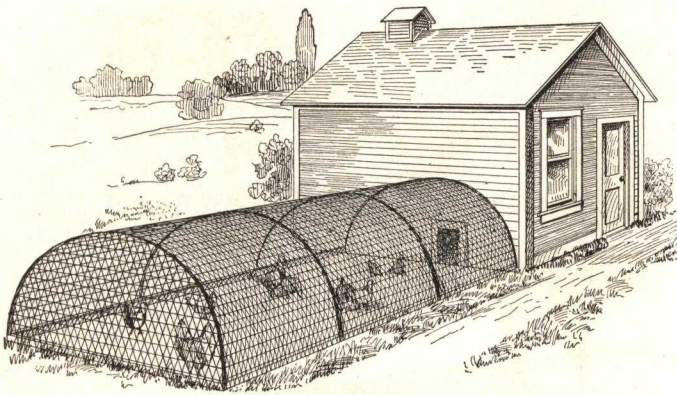

A Most Adequate Protection for Bulkhead or Area where Light and Air are desired.

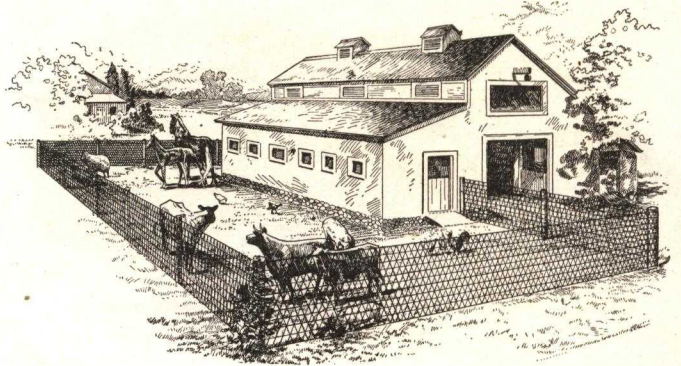

No Neater or More Sanitary protection can be secured for Porch Foundations or for Trellises.

Chicago New York Denver San Francisco

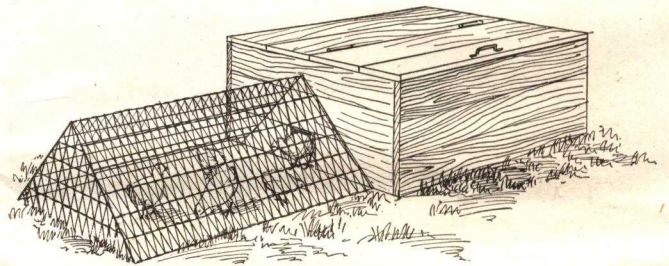

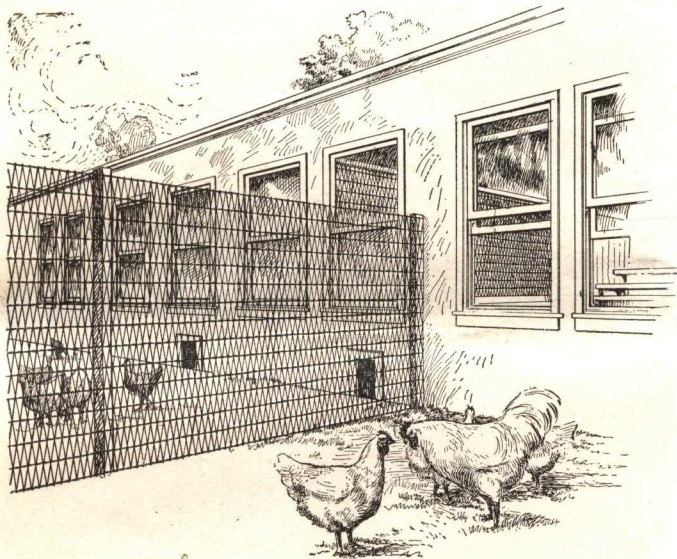

Lawn Fence for the Barn and Chicken Yard

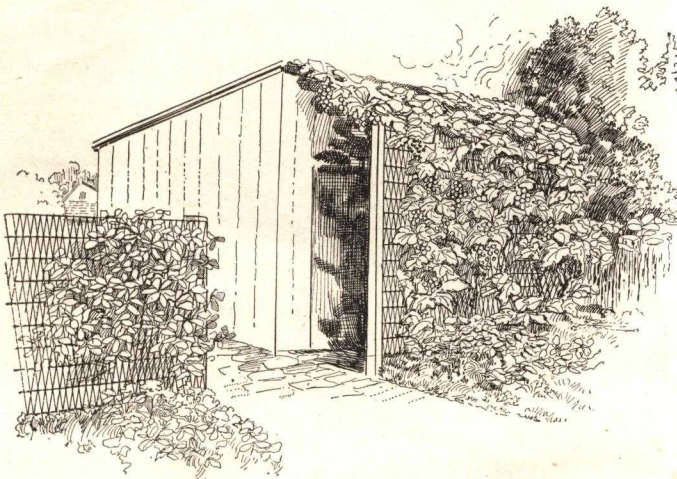

The illustration gives a good demonstration of what may be accomplished with Lawn Fence in the Chicken Yard.

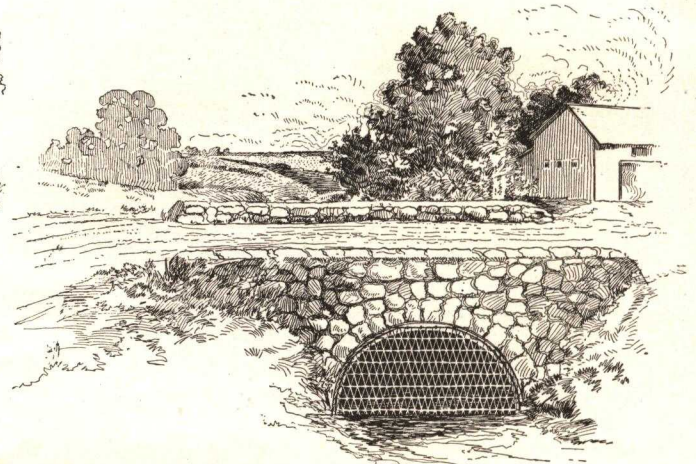

Its Strength, Close Woven Mesh, keeping in the smallest animals, and its Open Construction giving the eye a clear sweep of the barnyard, makes it indispensable here.

For Runs, Coops and Chicken Yards, the adaptability of Lawn Fence makes it a boon to the Poultry Raiser.

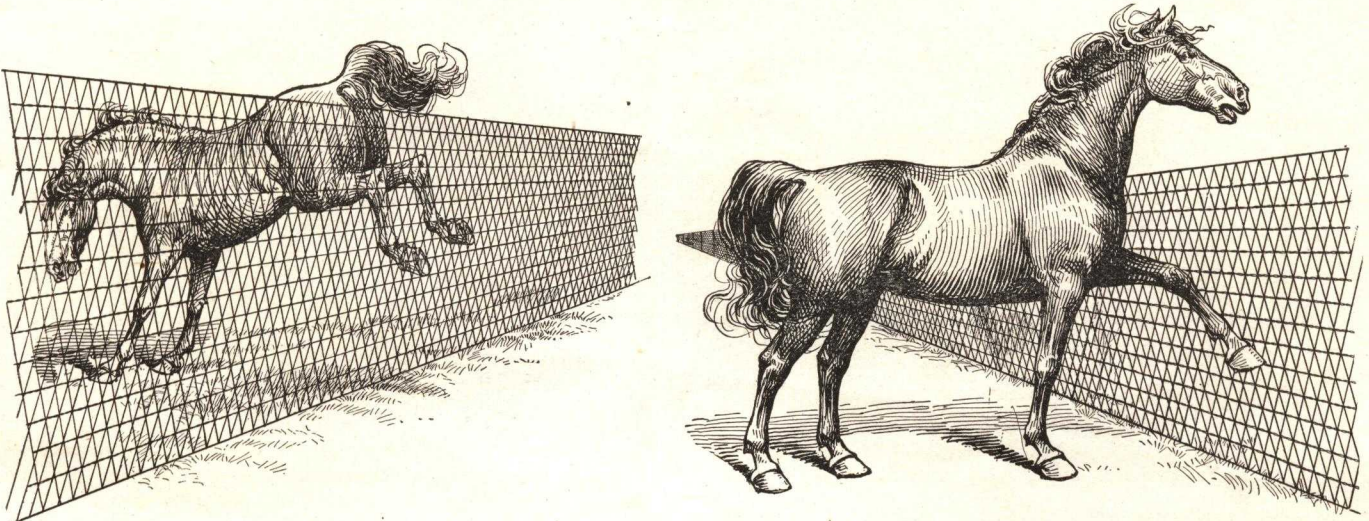

An Exceptional Shield for Barns and Outhouses. Absolutely sanitary and efficient.

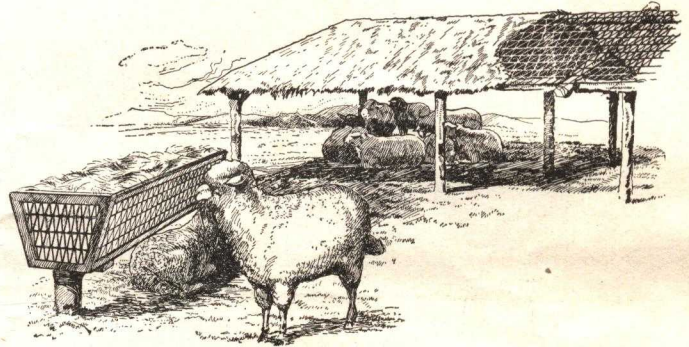

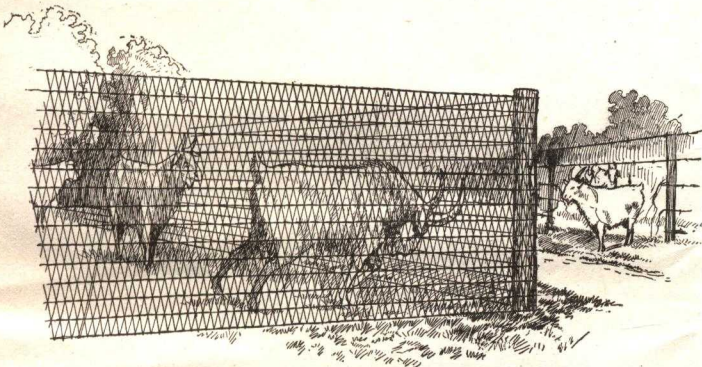

A Protection for Open Sewers or Pipes where it is desirable to obstruct obstacles but not air.

Made by American Steel & Wire Co.

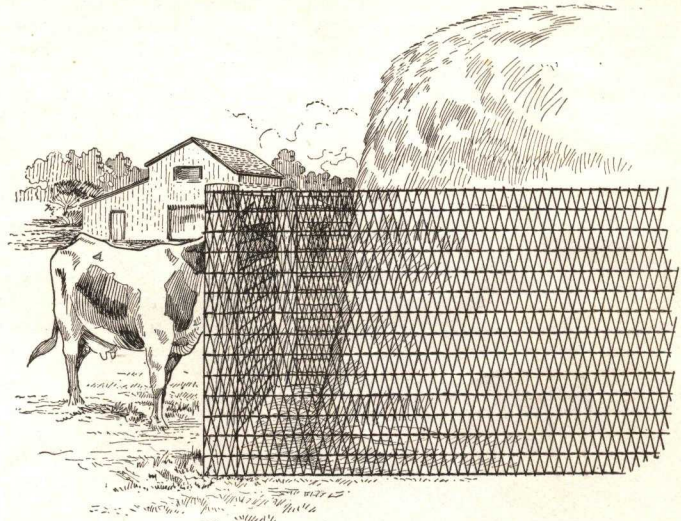

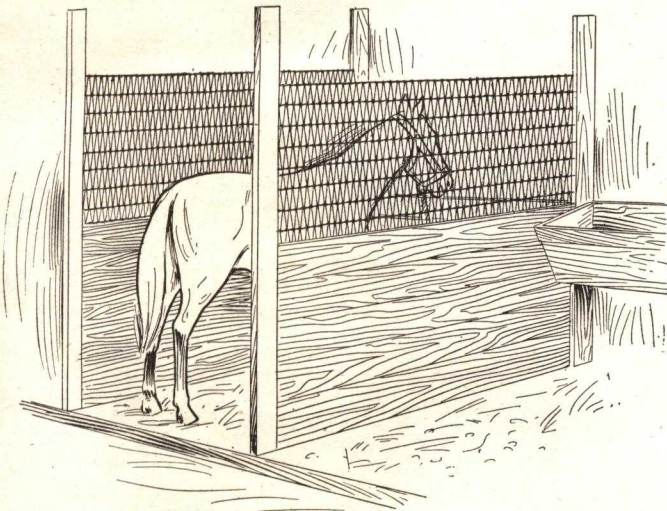

Lawn Fence Well Adapted for Stock Protection

The mesh is so small horses cannot get their hoofs through the fence.

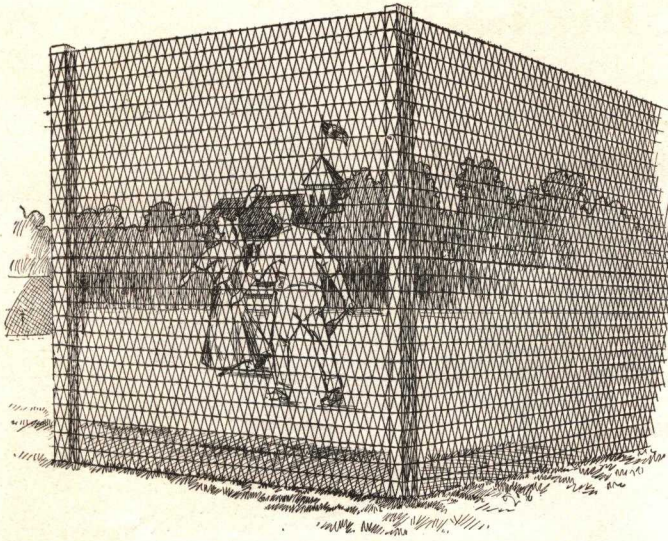

It cannot be broken down by the hardest usage. As a roofing for shelters and for feed troughs it is more economical and efficient than any other material.

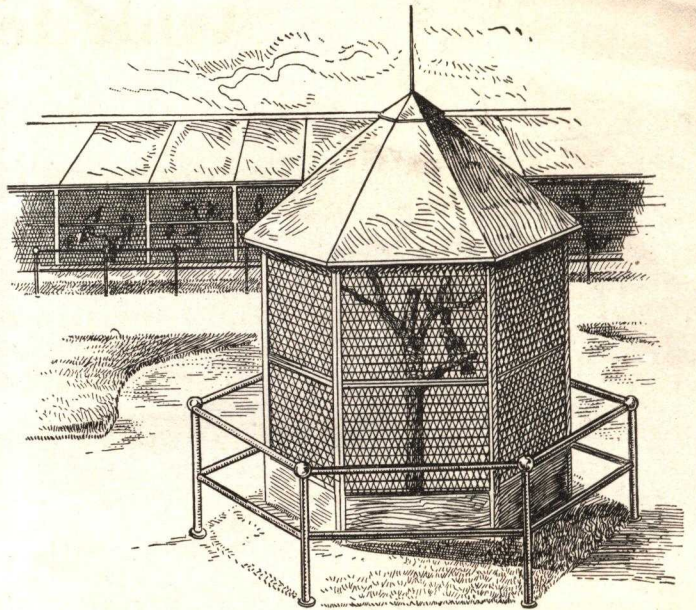

Lawn fence is used in thousands of modern stables for upper partitions between stalls. It gives air, light and is absolutely sanitary. It is also a most excellent means for keeping stock in bounds as illustrated.

Chicago New York Denver San Francisco

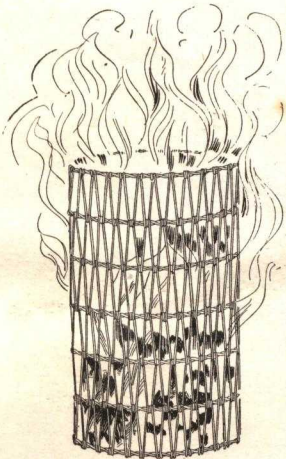

Lawn Fence in Public Places

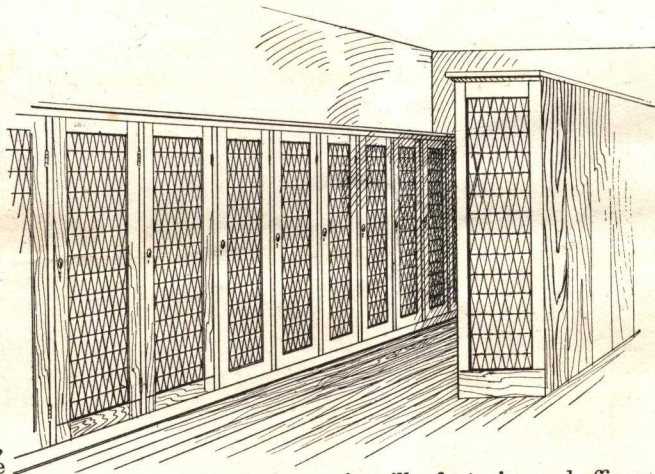

For public or private tennis court, Lawn Woven Wire Fence is ideal for its closely woven mesh and neat appearance.

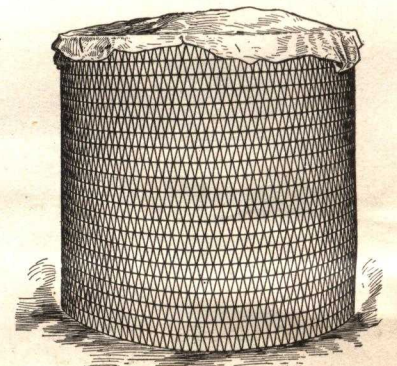

For Bird Cages in the Public Parks or Zoo, and for small animals, Lawn Fence is strong, durable, sanitary, and gives plenty of light and air.

For all refuse receptacles, Lawn Woven Wire is the greatest labor saver. Waste may be burned without being removed.

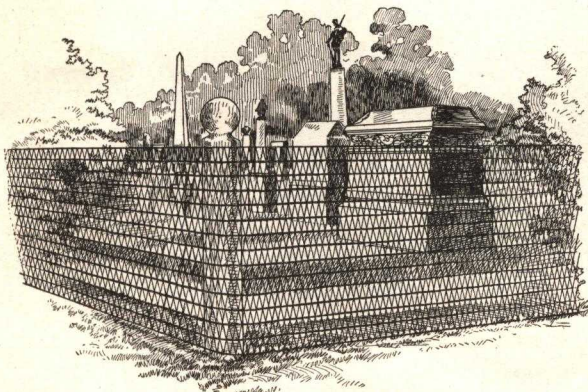

Lawn Woven Wire is in use in mills, factories and offices throughout the country. It is unequalled for lockers. Is strictly sanitary, theft proof and fire proof.

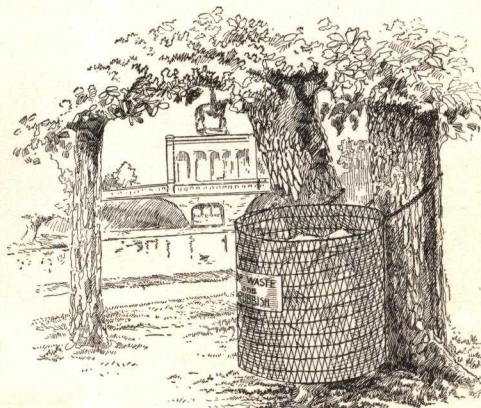

Woven Wire Wheat Bins

Lined with Wire Screen, Cloth or Tarpaulin, can be used for vegetable bins—perfect, cheap and vermin proof. Can be quickly installed any place, barn or cellar, either permanently or for temporary use. This is the modern form of wheat bin, serving in its small way with equal efficiency the purpose of the greater modern circular elevator. The cylindrical forms give strength, and the steel wires are more than ample for any strain that may be put upon them in this service.

These cribs are of the same form and size, and take the same prices as described in our American Steel Corn Crib Booklet.

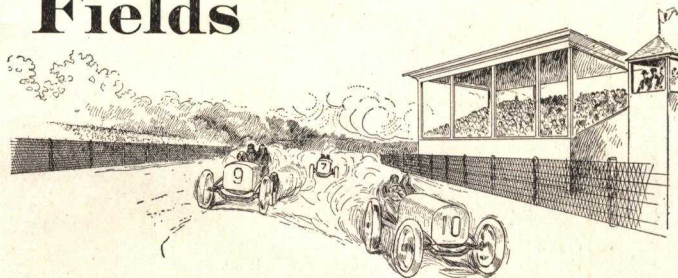

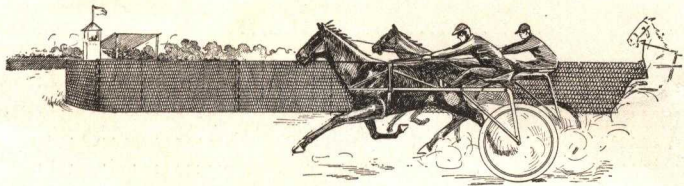

Lawn Fence is most efficient for enclosing Cemeteries and other Private Grounds.

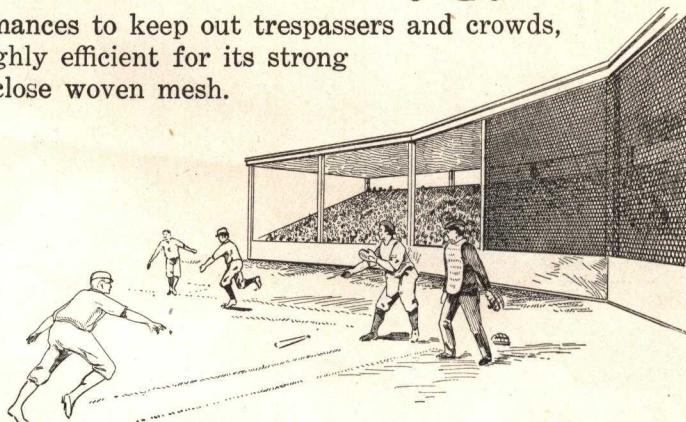

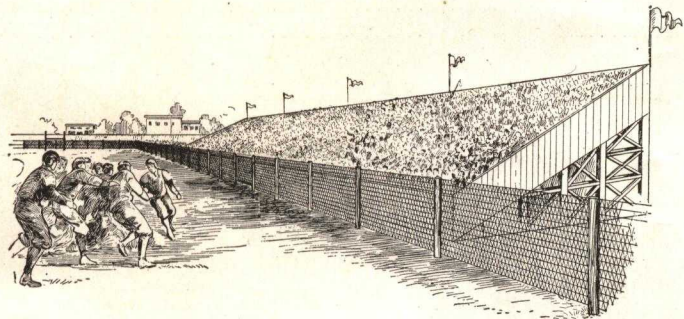

Most sanitary and labor-saving receptacle for waste in Parks, Fair Grounds and Institutions.

Made by American Steel & Wire Co.

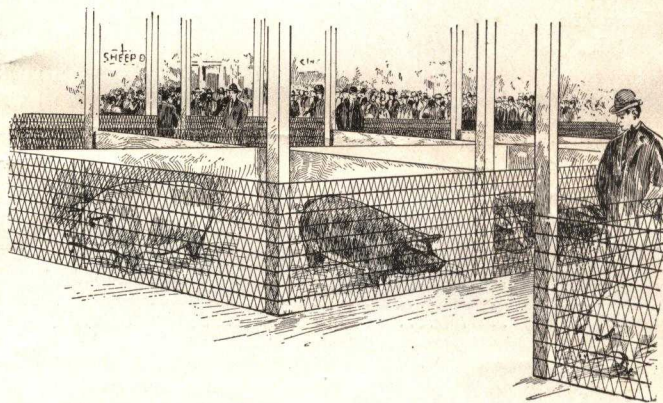

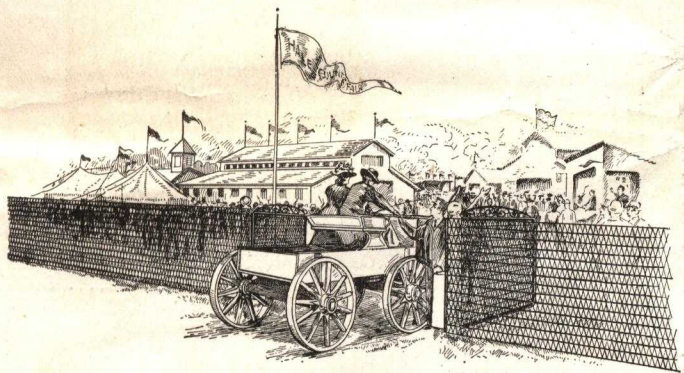

Lawn Fence for Race Tracks and Athletic Fields

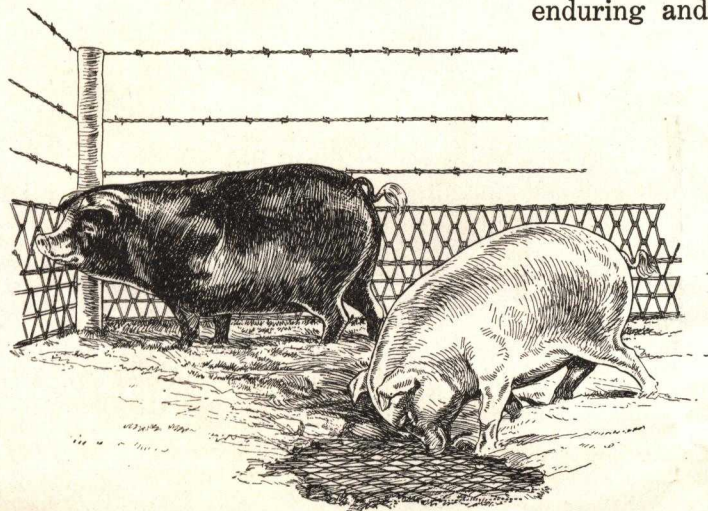

For Race Tracks and all Out-Door Performances to keep out trespassers and crowds, Lawn Fence is most thoroughly efficient for its strong construction and close woven mesh.

Lawn Fence is in use in scores of Ball Parks and Athletic Fields throughout the United States to protect spectators and keep crowds within bounds. Its long life makes it most economical.

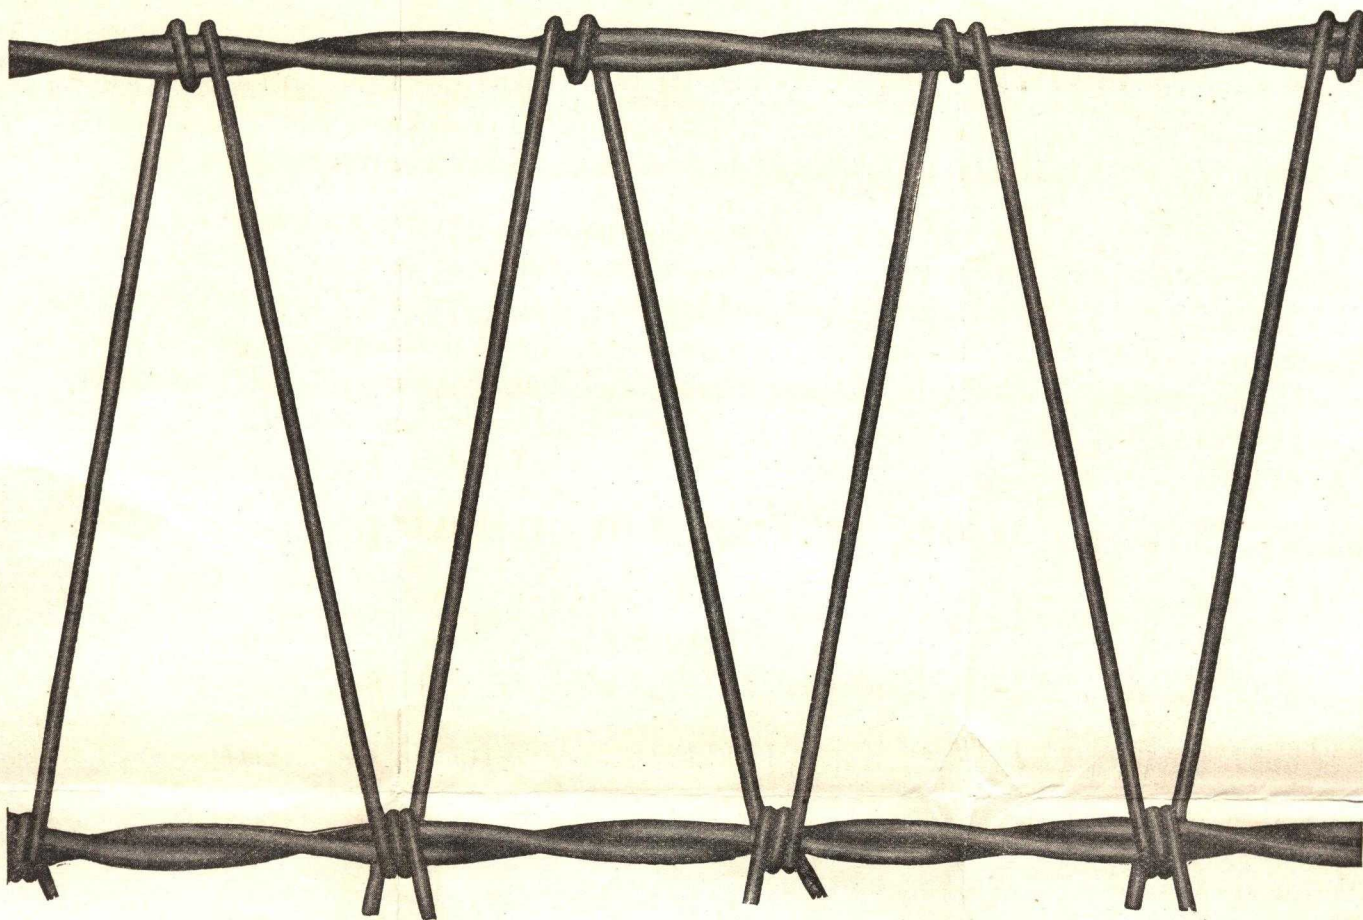

For County Fairs and Stock Shows, Lawn Fence is easiest to erect, most enduring and attractive.

Several Agricultural Colleges are recommending close mesh fabric to be buried about 3 inches under ground in hog pens to prevent rooting, and to prevent the sow from wallowing deep holes and smothering her young. The 2-inch Lawn Fence is the only thing for the purpose.

Chicago New York Denver San Francisco

Actual Size

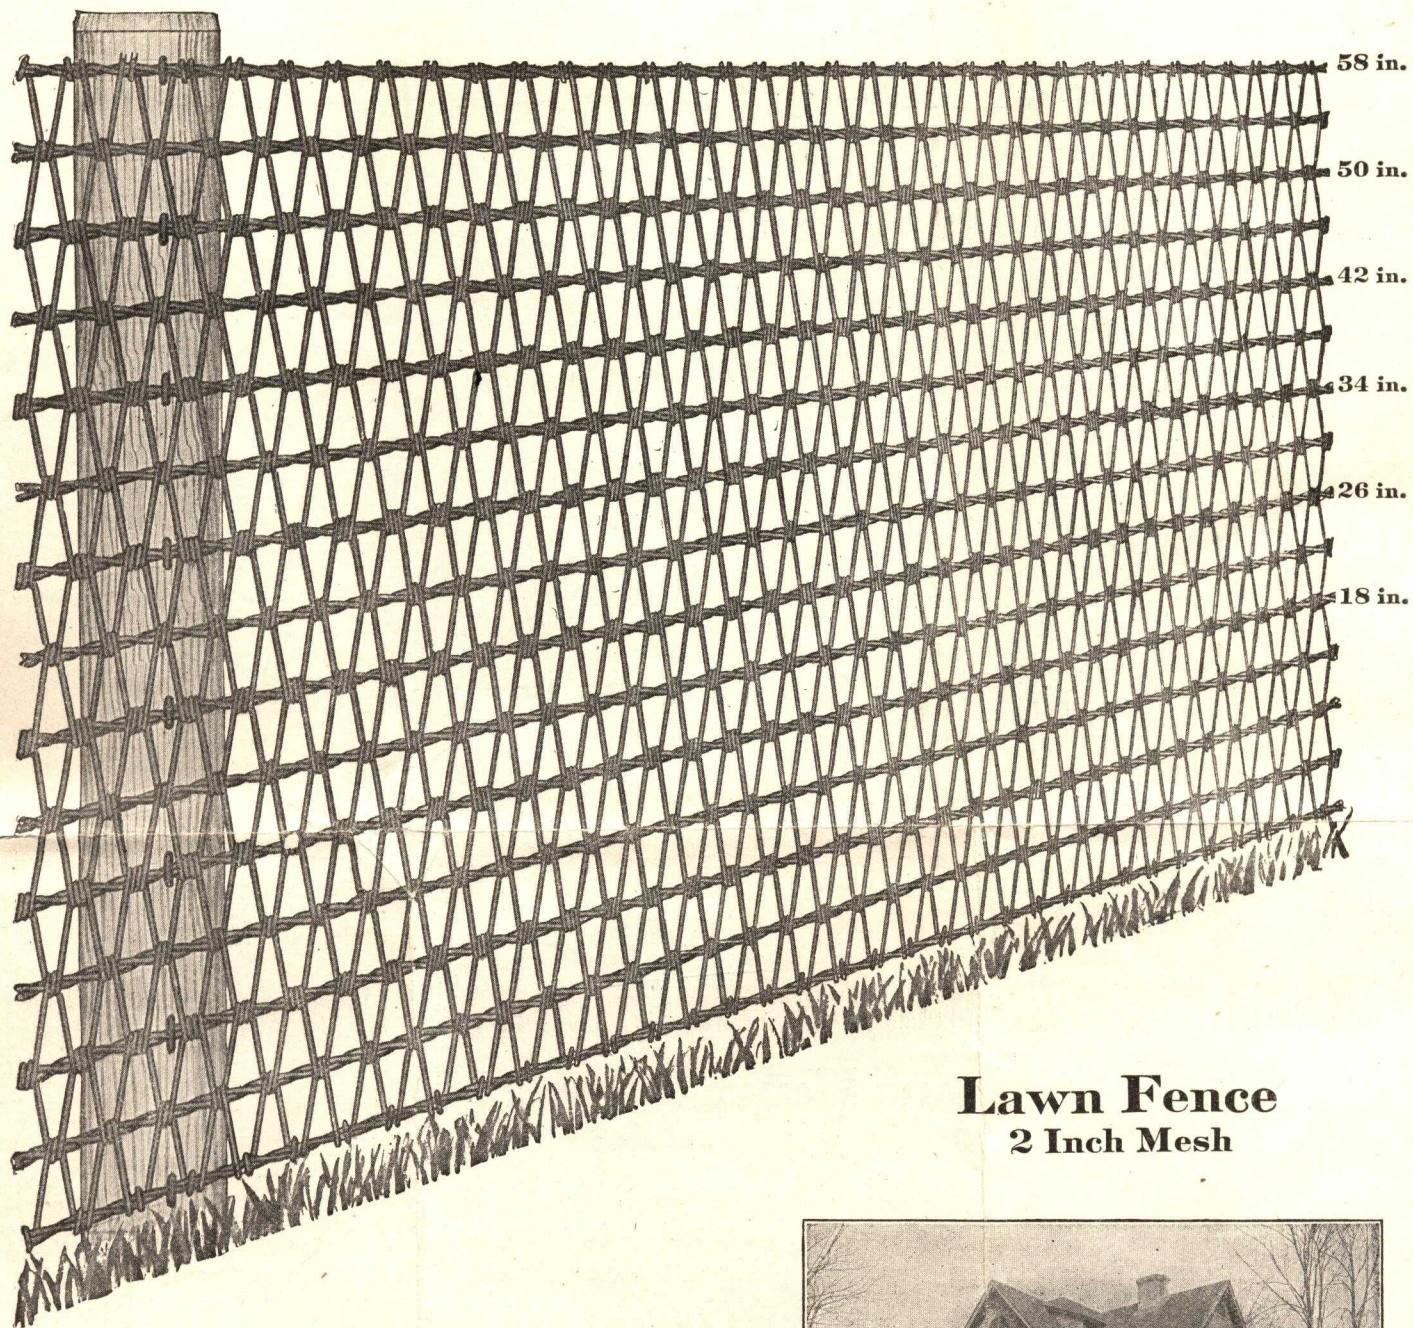

Lawn Fence 2 Inch Mesh

So that you may understand what is meant by 2 inch mesh we refer you to the above illustration showing the exact spacing. We are daily requested to suggest a fence which can be used as a line fence between property, to keep out dogs, chickens, etc., or to keep your own dogs from annoying your neighbors. There is nothing on the market which is as effective as our 2 inch Lawn Fence, and which can be secured at a reasonable price. For suburban and country homes, and for lawns, parks, etc., this fence is without an equal.

This is a comparatively new proposition, and perhaps your dealer may not be entirely familiar with it, and in this event submit this sheet to him, and we will place him in position to quote you attractive prices.

American Steel & Wire Co.

30 Church Street, New York City

Lawn Fence 2 Inch Mesh

All line wires in our Lawn Fence are composed of two galvanized wires twisted together, and the cross wires a single galvanized wire. This fence is made to the following specifications:

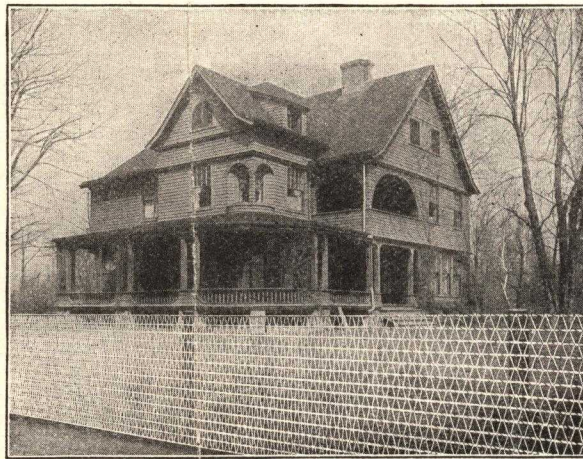

Line wires, two galvanized wires No. 12½ gauge, twisted together.

Cross wires, one galvanized wire No. 14 gauge.

Also,

Line wires, two galvanized wires No. 12½ gauge, twisted together.

Cross wires, one galvanized wire No. 12½ gauge.

(See other side)

AMERICAN STEEL & WIRE COMPANY

HUDSON TERMINAL, 30 CHURCH ST.

NEW YORK

New York, March 23rd, 1910.

TO FENCE DEALERS.

On several occasions we have written you in regard to our Lawn Fence, and as a result we have been favored with some very nice orders.

So that you may understand the various uses to which this fence may be put, we are enclosing herewith our latest booklet, to which we invite your careful attention.

Note particularly this fabric made with 2" mesh as described on page 4 and page 5, which is especially adapted for use on lawns and all of the various purposes illustrated in the booklet in question.

From the list prices on fence and gates as shown in booklet, we are quoting, subject to change without notice, as follows:-

LAWN FENCE

Carloads, not less than 24,000 lbs.....	78 1/2%
1000 rod lots.....	77 1/2%
Less quantities.....	76 1/2%

Gates

Any quantity.....	50%
All f.o.b. mill, Pittsburg, Pa.	Usual terms.

We would suggest your recommending Specification "G" in the 4" mesh, and Specification "J" in the 2" mesh, as both of these designs are excellent value. If you will calculate the price per rod by making use of the discounts shown in this letter, we know that you will agree with us that a very sightly, attractive and useful design of fence is placed in your hands at a less price than you can possibly secure equal value from any other manufacturer. Also you will be interested to learn the extremely low price at which we are prepared to sell you gates.

This is the season of the year when there is an active demand for fence of this design, and unless you are already familiar with this proposition, we suggest that you arrange to favor us with an order for a 10 rod sample roll, and it would be well to specify for Specification "J". For lawns and general fencing purposes, either the 42" or the 50" height, are in steady demand.

We are prepared upon request to send you a quantity of the booklets in question for distribution to prospective customers.

Trusting to be favored with at least your sample order, which will have our prompt attention, we beg to remain,

Yours very truly,

Dic. L.A.D.
